

VITROLIVE

GYNAECOLOGY AND FERTILITY CLINIC

The modern and patient-friendly VitroLive Gynaecology and Fertility Clinic was set up ten years ago. Since then, the VitroLive team has helped many couples to achieve their dream of becoming parents.

VITROLIVE SERVICES

The basic services package offered by the VitroLive clinic includes comprehensive infertility diagnostics as well as treatments in the field of gynaecology and obstetrics with a special focus on specialised infertility treatments for couples and in vitro fertilisation procedures (IVF). In addition, the Clinic offers comprehensive support in prevention of gynaecological disorders, pregnancy supervision, urological and andrological treatments, preventive and paediatric treatments as well as medical support for adults. At VitroLive it is possible to take advantage of the entire diagnostic package including basic and genetic tests, interventional diagnostics and specialised tests for pregnant women. A qualified psychologist is able to help with emotional difficulties in connection with fertility disorders as well as the general well-being and also with sexual health issues.

THE VITROLIVE TEAM

The VitroLive team is comprised of experienced doctors and embryologists who are constantly improving their knowledge and professional abilities. The medical team at VitroLive is led by Prof Rafał Kurzawa, Vice President of Polish Society for Reproductive Medicine and Embryology, long-term Chairman of the Fertility and Infertility Section at the Polish Society of Gynecologists and Obstetricians, co-author of the government project "Infertility treatment programme with the in vitro fertilisation method for the years 2013-2015" and also the Polish coordinator of the "European IVF Monitoring (EIM)" programme. As a recognition for his knowledge and professional achievements, Prof Kurzawa has twice received a special mention in the list of the hundred best healthcare professionals (lista STU) of the "Puls Medycyny" magazine. Three VitroLive

specialists are embryologists recognised by ESHRE and Polish Society for Reproductive Medicine and Embryology. The medical team also includes experts with certificates from the Polish Ultrasound Society and Fetal Medicine Foundation. Their specialist diagnostic expertise makes it possible to carry out early assessments of the foetus' inner organs and thus to exclude defects as early as in the first trimester of the pregnancy. One of our specialists, Dr Jerzy Węgrzynowski is the only expert in the West Pomeranian province awarded with the certificate from the Division for Echocardiography and Antenatal Cardiology of the Polish Ultrasound Society as well as one of only 15 doctors in Poland with the Certificate for Diagnostic Skills and Fetal Intrauterine Therapy. Our team also includes the Polish representative from the ESHRE Committee of National Representations — Dr Anna Janicka. Dr Janicka is directly involved in the implementation of the "European IVF Monitoring (EIM)" programme on behalf of ESHRE. All specialists at our Clinic are actively engaged in research in addition to their professional work. They participate in scientific congresses and present their research and observations in international medical publications.

WHY VITROLIVE?

VitroLive is a friendly and welcoming place for all patients, whether grown-ups or children. The consultations take place in three languages: Polish, English and German. Significant rank placements among infertility treatment clinics in Poland are a proof for the integrity and high standards of the services delivered by us. In addition, the results of patient monitoring carried out by the Association "Our Stork" demonstrate that the Clinic is being regarded as trustworthy and exemplary in terms of providing access to information for patients. The Clinic is a certified unit fulfilling the ISO 9001:2008 norm and the procedural standards followed by us are compatible with EC directives. VitroLive is the first institution in Poland to monitor the health and development of children born after treatment with ART methods. It also reports to EIM. VitroLive is actively taking advantage of EU funding designated for the purchase of diagnostic and surgical equipment. EU funding has made it possible to introduce new comprehensive solutions for Patients, such as embryo cultures with the use of the time-lapse technique making it possible to monitor embryos without having to remove them from the incubator.

VITROLIVE LOCALISATION

Most medical services are delivered in Szczecin. Consultations, ultrasound scans, collection of material for diagnostic tests as well as semen analysis and procedures are carried out at the al. Wojska Polskiego 103 and ul. Kasprzaka 2A locations. We also have surgeries in Kołobrzeg. We offer specialist medical consultations and basic diagnostics there. The Clinic's main building has parking for Patients and there is also a lift. There is a small garden on the Clinic grounds where our visitors can relax. The entire site is accessible for visitors with disabilities. The airport at Goleniów is located less than 50 km from VitroLive and it is well connected with the town centre. The Clinic can also be reached by train, motorway and public transport.
